Module ①:- Inference time compute SCALing

① Test-time compute is the computing resources used by the model during inference.

② The first step to introduce reasoning in models is to use more computing resources.

First Technique:-

① Chain of thought prompting

through prompting

① Chain of thought	Best of N
② zero shot	Beam Search
③ Tree of thought	Look ahead search

Deepseek R1 have the "aha" moment where model started to rethink becaus of Reinforcement

Method-③ :- Super Fined Tuning & RL

Method- 1

Inference - Time Compute scaling

① Chain of thought

↳ If we provide LLM to intermediate reasoning then the ability of LLM to perform

② few shot promption:-

↳ The method of providing input, output example to LLM is few shot prompting

Note → Chain of thought is significantly better for Large Language Model

UK Y because giving a hint to a intellectual will give far better result than giving it to normal person.

Zero Shots We provide no example
